Excerpt: .of heat emitted by the light at the side, or on a level with the center of the light, is about one-twelfth of the heat above the light. By holding the thermometer one foot above the light and also at a point one inch from the side of the light the thermometer registered the same number of degrees of temperature in both locations. Tests made with a 16-candlepower incandescent electric light gave a temperature at one inch above the globe equal to the temperature at one foot above a three-foot gas burner, or, in other words, the gas flame emitted from 140 to 160 times as much heated air as the electric light did. At about 16 inches above the electric light the thermometer showed no change or rise in temperature. The results of tests made with the arc electric light of 2, oco-candlepower,...

Reviews

I actually started looking over this publication. It really is rally interesting throgh studying period. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Dana Hintz**

Good electronic book and valuable one. It really is basic but unexpected situations in the 50 percent in the pdf. You wont really feel monotony at at any moment of your time (that's what catalogues are for concerning when you ask me).
